No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Identification in urine of a low-molecular-weight highly polar
glycopeptide containing cysteinyl-galactose.";

Biochem, J. 123:259-259 (1971).

1- FUNCTION: The identity of the glycoprotein from which this peptide
is derived is unknown. No physiological function has been
attributed. An erythrocyte membrane glycopeptide having a
similar structure has also been found.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1. Biochem. 199:45-50(1991). It is biochem. 199:45-50(1991). This enzyme catalyzes the hydrolysis of the N-termina peptide bond of an N-acetylated peptide to generate an N-acetylated amino acid and a peptide with a free N-terminus. It preferentially cleaves off Ac-Ala, Ac-Met and Ac-Ser. CATALYTIC ACTIVITY: Acylaminoacyl-peptide + H(2)0 = acylamino acyl-peptide + H(2)0 = acylamino acylamino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SUBCELLULAR LOCATION: Cytoplasmic. It may inactivate the binding to its prosthetic copper group.

PIR; A01341; XEYDGD.

Copper; Metalloenzyme inhibitor.
